

Week 4 Academy Mapping Errata

MCP module lesson references for Weeks 3–4 Companion • Verified against live Skilljar UI

WHAT THIS DOCUMENT FIXES

The Weeks 3–4 Companion's Week 4 Academy blocks said "lesson names not screenshot-verified" and gave directional pointers. This errata supplies the **actual lesson names** from Skilljar's *Model Context Protocol* module. It also flags two days (D25, D27) where Skilljar has no direct match — those days use the MCP spec instead. Same pattern as the Weeks 1–2 errata.

SCOPE	7 days of Week 4 (Days 22–28)
SOURCE	Live Skilljar UI screenshot
COURSE	Building with the Claude API (anthropic.skilljar.com)
PREPARED	June 2026

01

MCP Module — Full Lesson List

The Skilljar *Model Context Protocol* module has 12 lessons, including the end-of-module review and quiz. Five lessons map directly to your Week 4 days; the rest are covered within them.

EXHIBIT 1 • ALL 12 LESSONS IN ORDER

01	Introducing MCP
02	MCP clients
03	Project setup
04	Defining tools with MCP
05	The server inspector
06	Implementing a client
07	Defining resources
08	Accessing resources
09	Defining prompts
10	Prompts in the client
11	MCP review
12	Quiz on Model Context Protocol

USE THE SIDEBAR CHECKMARKS

As with Weeks 1–2, the Skilljar UI shows a circle next to each lesson that fills in when you mark complete. That's your authoritative tracker. Mark each lesson done as you watch — you'll see your module-completion percentage grow, and the quiz unlocks once everything before it is done.

02

Per-Day Lesson Mapping (Week 4)

For each day, the verified Skilljar lessons to watch. Where Skilljar has no direct match, the row flags this explicitly and proposes the MCP spec as the substitute resource.

D22	W4 • Mon MCP — Concepts & Primitives	SKILLJAR MODULE Model Context Protocol
○ Introducing MCP ~10m ○ MCP clients ~8m ○ Project setup ~5m Project setup walks through the course's running MCP project — worth watching even if you skip the setup steps yourself, because the example carries through the next ~6 lessons.		
D23	W4 • Tue Your First MCP Server	SKILLJAR MODULE Model Context Protocol
○ Defining tools with MCP ~10m ○ The server inspector ~6m Direct match for today's notes-server lab. <i>The server inspector</i> covers the exact <code>npx -y @modelcontextprotocol/inspector ...</code> tool you used in the lab.		
D24	W4 • Wed Resources & Prompts	SKILLJAR MODULE Model Context Protocol
○ Defining resources ~8m ○ Accessing resources ~6m ○ Defining prompts ~6m ○ Prompts in the client ~6m All four lessons in one day — they're short and pair tightly with the bug-tracker lab. <i>Accessing resources</i> covers the URI pattern you used for <code>bug://<id></code>.

W4 • Thu

Transports — Stdio vs Streamable HTTP

SKILLJAR MODULE

(no direct lesson)*No direct Skilljar lesson — see notes.*

The Skilljar course teaches stdio as the default and doesn't have a dedicated transports lesson. For today's deep dive on stdio vs streamable-http, read the [MCP spec transports section](#) (~15 min). It's the authoritative source and where the exam material comes from.

D26

W4 • Fri

Programmatic Client

SKILLJAR MODULE

Model Context Protocol

- Implementing a client ~12m

Perfect alignment — this is THE lesson for today's lab. Watch carefully and compare the instructor's `ClientSession` usage with what you wrote in `mcp_client.py`. Patterns should match very closely.

D27

W4 • Sat

Multi-Server & Production Concerns

SKILLJAR MODULE

(no direct lesson)*No direct Skilljar lesson — see notes.*

Skilljar doesn't have a multi-server or auth lesson — that material comes from the spec. Read the [MCP spec authorization section](#) for OAuth 2.1 specifics (~20 min). Multi-server routing is a production pattern, not a course topic — your lab IS the lesson today.

D28

W4 • Sun

Week 4 Review

SKILLJAR MODULE

Model Context Protocol

- MCP review ~8m

- Quiz on Model Context Protocol ~15m

The MCP review lesson before the quiz is a recap — perfect for Sunday consolidation. Take both today. Aim for 80%+ on the quiz.
